ESG Pillar Score

B EUR Class

Morningstar Index

ESG Pillar Scores are an objective way to assess the components of a portfolio's ESG risk through the traditional ESG thematic framework. ESG risk pillars and their contributions to the Portfolio Sustainability Score allows for comparison of the thematic risk drivers, as well as a deeper understanding of the ESG risk composition of portfolios. The pillar scores are calculated as an asset-weighted average of the corresponding company-level risk scores from Sustainalytics.

The Pillar Scores represent the amount of risk in the Portfolio's sustainability score attributed to each component (i.e. E, S or G). Unallocated: Unmanaged risk for companies with an ESG Risk rating which hasn't been broken out by Environmental, Social or Governance components.

ESG information is provided with reference to a Morningstar Index which closely aligns to the Fund's Benchmark and is for illustrative purposes only.

Sustainability Score

Corporate Sustainability Score

Carbon Intensity

Scope 1+2/Scope 1+2+3 is the asset-weighted average for the portfolio of the underlying holdings' Carbon Intensity scope 1, 2 and 3 (in USD terms). The average only includes holdings for which company Carbon Intensity Scope 1, 2 and 3 (in USD terms) is available. Carbon intensity for a company represents the volume of carbon emissions per million dollars of revenue, computed as follows: Total Emissions Scope 1, 2 and 3 (metric tons of CO₂) / Revenue (Mil USD). For a portfolio, carbon intensity represents the average carbon efficiency of its investments, in metric tons of CO₂. A lower value indicates lower intensity, and greater carbon efficiency.
